Interannual controls of the phytoplankton assemblages in Baffin Bay

JGR: Biogeosciences

- Description of:

Data S1: Forcing fields of silicate and nitrate concentrations from January 1 to May 15 for the reference simulation.

Forcing fields of nitrate and silicate concentrations from January 1 to May 15 for the reference simulation (EXP-0), respectively. They are also the in situ nitrate and silicate concentrations at the Qikiqtarjuaq sea ice camps between mid-April and the end of May in 2015 and 2016 (67.4797°N, -63.7895°E). It contains a subset of the files available in the dataset Massicotte et al. (2019). <https://doi.org/10.17882/59892>. The paper related to this dataset is Massicotte et al. (2020). <https://doi.org/10.5194/essd-12-151-2020>.

Each binary file contains 75 values each consisting in a four-bytes float in big endian. Their units are $\mu\text{M}=\text{mmol m}^{-3}$. These 75 values correspond to the depth profile of the configuration available in the variable RC of grid.t001.nc.
